

Sprint in to Westrans for your new Sprinter drive shaft

The OE drive shaft originally installed in your Sprinter van features staked-in, non-removable U-joints. That means that when you're dealing with a U-joint problem, you can't simply replace that part – you'll have to replace the entire drive shaft.

Custom paint colours available.

But did you know that you don't need to return to the original manufacturer to replace your Sprinter's drive shaft?

Westrans repairs and custom-builds drive shafts for all applications, including Sprinter vans. Westrans offers competitive prices and quick turnaround times. Our drive shafts are made with top-quality Spicer parts, high-speed balanced, and quality-ensured. Best of all, we can upgrade your drive shaft to allow for replaceable U-joints, meaning that the days of replacing your entire drive shaft for a single U-joint failure are over.
